

## ABSTRACT OF THE DISCLOSURE

A device to move heavy items made up of a substantially flat rectangular body used to carry heavy items, a handle assembly with two handles perpendicularly attached to an H-shaped handle stand that is perpendicularly attached to the proximal end of the substantially flat rectangular body. A sling is provided on each handle of the handle assembly to hold long and awkward items extending from the substantially flat rectangular body. A wheel positioned at the distal end and center of the substantially flat rectangular body is also provided to facilitate movement of the device and a cowl above and around the wheel, having an open front to allow the wheel to extend beyond the cowl and the substantially flat rectangular body.
